

## SUBJECT INDEX TO VOLUME 1

ADME-aware library design.....338	bioinformatics application to development of.....210
software for .....338	choice of vehicle in .....216
ADMET (Absorption/distribution/metabolism/ excretion and toxicity).....179	design of.....216
effect of carcinogenicity on.....188	detection of protein-encoding areas in genome
effect of cytochrome p <sub>450</sub> on.....187	sequences for .....211
effect of mutagenicity on.....188	genomics studies of .....210
effect of P-glycoprotein on .....188	prediction of functional features of proteins for.....211
effect of passive intestinal absorption on.....185	principles of design of.....216
modeling of.....180	role of B epitope prediction in .....213
other properties of.....189	role of T epitope prediction in.....214
prediction by projecting onto chemical space .....179	Bioactive molecules.....147
prediction of specific properties of .....182	ADME properties of.....155
quality of data of.....181	computational technologies for.....153
role of blood-brain barrier (BBB) in.....184	data dimensionality reduction of.....155
role of logP in .....182	fingerprints of.....148
value of accurate prediction of.....179	gene networks for .....151
Aldose reductase.....115	integrated knowledge systems for .....153
Antioxidants.....257	metabolic networks for .....151
<i>de novo</i> design of .....265	molecular representations of.....154
elucidation of.....257	networks of interacting proteins for .....152
modification of .....265	post-genomic design of.....147
qualitative SAR for.....257	protein networks for .....152
quantitative SAR for .....263	structure-based virtual docking of .....154
rational design strategies for .....264	Biological networks.....150
structure-activity relationships of.....257	topology of .....150
theoretical methods in study of .....264	3D-CAN.....26
Antipsychotics.....349	for QSAR studies.....26
action mechanism of .....349	role in free radical chemistry.....26
application of QSAR to.....352	use of.....26
combinatorial chemistry for developing .....352	Carcinogenesis.....237
effect on D2 dopamine receptor .....349	QSAR for congeneric series.....237
Antipsychotics design.....347	Carcinogenicity.....237
application of QSAR.....347	expert systems for predicting .....249
combinatorial chemistry methods for.....347	from molecular structure .....237
Aromatic amines .....238	prediction of.....237
biotransformation of.....238	use of molecular descriptors.....248
QSAR models for carcinogenicity of.....239	Cardiotoxicity.....189
Artificial neural networks (ANN).....17,65	Catalytic site inhibitors .....112
and chance correlation.....69	Catechol .....261
data distribution in .....69	role of .....261
effect of over-parameterization on.....69	Cathepsin D .....114
evaluation of robustness of.....70	Chemogenomics.....147
for ecotoxicity prediction of chemicals.....70	experimental chemogenomics for .....150
for predicting ecotoxicity of environmental pollutants	ligand-seeded phylogenetics in.....149
in QSTR.....65	structural.....149
kinds of.....69	Collagen molecule.....410
modeling of.....17	Computer simulation .....406
performance of .....65	model for .....410
problems of.....69	of ligand binding to target molecule.....406
structure of.....69	CoMFA.....319
training of.....69	multimode ligand binding in.....319
Artificial neural networks/support-vector machines.....174	
Artificial vaccine constructs.....207	
antigen mapping for.....212	

Computational ADME/Tox modeling .....	325	target flexibility to.....	110
assessing prediction reliability of.....	335	treating ligands as fragments in.....	110
assessing predictive capability of.....	334	Docking algorithms .....	96
building of.....	331	and combinations with scoring functions .....	96
in drug design.....	325	Drug compounds .....	326
outliers in data set in.....	332	ADME/Tox of .....	329
preventing overfitting in .....	334	properties of .....	326
selecting for.....	334	Drug development .....	337
Computer-Aided drug design .....	43,347	ADME/Tox tools in.....	337
for typical/atypical antipsychotic drugs .....	347	role of ADME-driven library design.....	337
future prospects for .....	49	Electronegativity .....	27
proteomics in.....	43	and inductive partial charges.....	27
Computer modeling.....	400	Epitology.....	378
of molecules.....	400	Flavonoids.....	261
Correlation analysis .....	21	elucidation of qualitative SAR of .....	261
and quantitative models for substituent constants .....	21	G-protein coupled receptors (GPCRs).....	297
Counter propagation neural network (CPNN).....	73,132	binding mode prediction of .....	297
and leave-one-out cross validation.....	76	enrichment factors of.....	297
and outliers .....	76	homology models of.....	297
and recall ability test.....	76	Genetic algorithm (GA) .....	129
applications in QSAR modeling.....	74	molecular design based on.....	129
architecture of .....	73	variable selection of linear model by .....	129
clustering vs. classification of .....	76	variable selection of non-linear model by .....	132
in descriptor selection.....	76	HERG .....	189
in molecular structure-toxicity studies .....	73	HIV-1 protease.....	290
in testing/validation.....	76	application to structure-based drug design .....	291
learning strategy of .....	73	binding mode prediction of .....	290
variable selection of non-linear model by .....	132	enrichment factor of .....	291
Cyclin-dependent kinases (CDKs).....	112	Hopfield neural network (HNN).....	141
Cyclin-dependent kinase 2.....	53	rational exploration of molecular alignment by.....	141
active/inactive form of.....	58	Human carbonic anhydrase .....	112
and flavone inhibitors.....	60	Immunogenicity.....	378
and purine derivatives.....	59	<i>In silico</i> ADME prediction.....	365
and ATP .....	59	data sets in.....	365
structure of.....	55	models for.....	365
conformation differences of.....	58	role in blood-brain barrier permeation prediction.....	368
conformations in binding pocket of.....	62	role in metabolism prediction .....	371
differences in side-chain of .....	62	role in P-glycoprotein (Pgp) substrates/inhibitors	
indirubins as inhibitor of .....	62	prediction.....	370
inhibition of.....	56	role in plasma protein binding prediction.....	367
interaction with inhibitors.....	53	role of human intestinal absorption prediction.....	366
interactions with ligands.....	59	Induced-fit simulation .....	307
mechanism of activation of.....	58	application to GPCRs .....	307
molecular fork of.....	56	application to nuclear receptors.....	307
structural basis for .....	53	Inductive descriptors .....	21
UCN-01 as inhibitor of.....	62	application in QSAR studies of biological	
Dentin adhesive ligands .....	412	activity.....	21, 30
indirect evaluations of .....	412	future prospectives for .....	39
DNA polymerase $\beta$ .....	79		
binding site of .....	79		
three-dimensional structural analysis of.....	79		
DNA topoisomerase II.....	79		
binding site of .....	79		
three-dimensional structural analysis of.....	79		
Docking.....	109		
evaluation of.....	111		
ligand flexibility during.....	109		

inductive hardness/softness in .....	28	parameter selection for .....	4
three-dimensional correlation analysis of .....	23	prediction of .....	9
Kohonen artificial neural network .....	73	Medical chemistry .....	350
in molecular structure-toxicity studies .....	73	3D-QSAR methods in .....	351
Kohonen neural network (KNN) .....	139	computer-assisted molecular design applied to .....	350
comparative molecular surface analysis by using .....	139	Molecular descriptors .....	15
LCA-binding residues .....	89	calculating theoretical .....	15
identification of .....	89	using computer technology .....	15
in DNA topo II .....	89	Molecular docking .....	93
Library synthesis .....	104	advances in .....	93
synthetic challenge in .....	104	and virtual screening techniques .....	94
Ligand binding domains .....	118	applications of .....	99
Ligand docking .....	275,423	parameters influencing .....	95
algorithms of .....	276	requirements for .....	93
and protein flexibility .....	281	using homology models .....	98
comparison of algorithms of .....	279	Multi-dimensional QSAR .....	307
effect of protein flexibility .....	425	for drug targets .....	312
empirical scoring functions of .....	280	induced fit to .....	308
enrichment factor for .....	284	in drug discovery .....	307
evaluation of accuracy of .....	275	of GPCRs .....	312
evolutionary methods for .....	278	Quasar based on .....	316
for protein targets .....	275	Multi-way PLS .....	134
force field-based methods for .....	276	comparative molecular surface analysis by using .....	139
force field-based scoring functions of .....	280	rational choice of bioactive conformation by .....	134
fragment-based methods for .....	278	Multiple receptor virtual screening .....	436
hybrid methods for .....	279	NA-binding residues .....	86
incremental methods for .....	278	identification of .....	86
knowledge-based potentials of .....	281	in topo II .....	86
limitation of .....	275	NA/LCA interaction interface .....	80,84
mechanisms of .....	424	mapping of .....	84
methods incorporating protein flexibility .....	429	on DNA topo II .....	80
methods of .....	275	search for .....	80
molecular dynamics-based methods for .....	432	Nervonic acid (NA) .....	79
pharmacophore models for .....	436	analysis of binding of .....	84
receptor flexibility in .....	423	binding site of .....	79
scope of .....	275	effects on DNA metabolic enzymes .....	81
scoring function features/comparisons of .....	275,280,281	enzyme assays of .....	80
shape complementarity of .....	279	enzymes used for .....	80
shape complementary-based scoring functions of .....	281	materials/methods for analysis of .....	80
target model in .....	300	NMR experiments of .....	80
use of multiple receptor conformations in .....	433	3D structural analysis of .....	79
Ligand model .....	299	use of NMR for analysis of .....	84
Lithocholic acid (LCA) .....	79	docking model of .....	80
analysis of binding of .....	84	Neural network (NN) .....	12
binding site of .....	79	molecular design based on .....	129
effects on DNA metabolic enzymes .....	81	Neuraminidase .....	294
enzyme assays of .....	80	application to structure-based drug design .....	296
enzymes used for .....	80	binding mode description of .....	295
materials/methods for analysis of .....	80	binding mode prediction of .....	295
NMR experiments of .....	80	enrichment factor of .....	296
3D structural analysis of .....	79	experimental binding energy prediction of .....	295
use of NMR for analysis of .....	84	p38 .....	287
docking model of .....	80	binding mode prediction of .....	287
LogP .....	3	enrichment factor of .....	288
approaches to .....	3		
calculation of .....	3		
computational model for .....	4		

Partial least squares (PLS).....	129	orientation of.....	307
molecular design based.....	129	selection of bioactive conformation for .....	307
multi-way type.....	129	in drug discovery.....	307
variable selection of linear model by .....	129		
Polycyclic aromatic hydrocarbons (PAHs).....	242	Quantitative structure-activity relationships	
biotransformation of.....	242	(QSAR).....	21,129,163,195,237
QSAR models for carcinogenicity of.....	242	applicability domain in consensus tree methods of.....	200
Predictive models.....	21	assessment of chance correlation in .....	203
for substituent constants .....	21	consensus modeling of .....	196
for inductive reactivity indices .....	21	external validation vs. cross-validation of.....	198
Probing ligand alignment.....	307	for non-congeneric series of chemicals .....	246
application to GPCR.....	307	limitations of.....	195
application to nuclear receptors.....	307	model validation of.....	198
Proteases.....	289	multicollinear descriptors in .....	163
Proteins.....	234	novel computational approaches in.....	129
modeling side-chain conformations in .....	234	of antimicrobial activity of cationic peptides.....	30
Protein flexibility.....	99,281,431	of aromatic amines.....	238
and ligand.....	99	of polycyclic aromatic hydrocarbons.....	242
and tautomerism.....	99	on antibiotic-likeness of compounds .....	35
hybrid methods for .....	282	regulatory perspective of .....	195
multiple receptor conformers for .....	282	use of molecular descriptors.....	248
overestimation of molecular size in.....	99	validation of models of.....	251
receptor side-chain flexibility for .....	281		
soft-docking for.....	281	Radical-scavenging activity .....	259
<i>via</i> collective degrees of freedom .....	431	selection of theoretical parameters measuring of.....	259
Protein interaction networks .....	153	Radical-scavenging antioxidants.....	257
modules in.....	153	rational design strategies for .....	257
Protein kinases.....	282	structure-activity relationships of.....	257
application to structure-based drug design .....	285	Raptor.....	319
binding mode prediction of .....	283	Receptor flexibility.....	425
CDK2 as.....	283	Grid-based methods to.....	435
docking accuracy of.....	283	multiple receptor conformation-based methods to ....	436
Protein structures.....	152	sampling side-chain conformers in.....	430
evolutionary dynamics of.....	153	Recombinant antigens .....	217
networks of .....	152		
Proteomics.....	43	Schizophrenia .....	347
application in computer-aided drug discovery.....	47	amisulpiride in.....	349
chemical .....	46	clozapine in.....	349
computational.....	46	incidence of.....	347
current achievements in.....	47	olanzapine in .....	349
future prospects for .....	49	quetiapine in.....	349
identification of drug targets by.....	47	risk factors for.....	347
in computer-aided drug design .....	43	risperidone in.....	349
in determination of drug mechanism of action.....	47	role of 3D-QSAR-CoMFA/CoMSIA.....	351
in determination of drug toxicity.....	48	role of GRID/GOPLE methods .....	351
in determination of side effects.....	48	role of pharmacological QSAR descriptors .....	351
in drug discovery.....	46	treatment of.....	348
structural.....	46	use of typical/atypical antipsychotics.....	348
sub-disciplines of .....	46	ziprazidone in .....	349
topological.....	47	Scoring.....	93,110
Pyrogallol.....	261	advances in.....	93
role of .....	261	methods for.....	94
3D-QSAR.....	307	performance of .....	97
for drug targets.....	312	Self-organizing maps (SOM) .....	73
induced fit to.....	308	and leave-one-out cross validation.....	76
		and outliers .....	76
		and recall ability test.....	76
		applications in QSAR modeling.....	74
		architecture of .....	73

clustering vs. classification of.....	76	binding mode prediction of.....	293
in descriptor selection.....	76	enrichment factor of.....	293
in testing/validation.....	76	Thymidine kinase (TK).....	285
learning strategy of.....	73	application to structure-based drug design.....	287
Skin penetration.....	11	binding mode prediction of.....	285
computer aided modeling of.....	11	docking accuracy of.....	285
data interpretation of.....	11	enrichment factor of.....	286
determination of.....	13	Thymidylate synthase.....	113
mathematical models for.....	14	Thyroid receptor.....	118
sophisticated interpretations of.....	17	Tocopherols.....	263
understanding of.....	11	elucidation of qualitative SARs of.....	263
Skin research.....	18	Type 1 collagen.....	397
future of.....	18	binding studies of.....	411
Skin structure.....	11	collagen-ligand binding assay of.....	418
and route of penetration.....	11	computational/experimental analysis of.....	397
Small molecule virtual libraries.....	103	direct docking methods to.....	412
sources of new chemical entities for.....	103	direct methods to analyse.....	407
Soft docking.....	281	docking simulations of.....	408
Solubility.....	183	evaluation by indirect method.....	407
Solvent accessibility.....	223	genetic algorithms (GA) to.....	406
ACCESS for.....	224	geometric matching of.....	408
applications in drug design.....	232	hybrid algorithms to.....	406
applications to drug delivery.....	234	immobilization of polypeptides on.....	418
ASA state prediction based on specific thresholds.....	226	ligand binding to.....	397, 409, 411
ASA view for.....	226	molecular/binding conformations at.....	402
ASC for.....	225	molecular dynamics to.....	403
databases/programs for computing.....	224	programs/tools for computer modeling	
definition of.....	224	simulations to.....	399
DSSP for.....	225	random search methods for.....	403
from three-dimensional structures.....	224	simulated annealing to.....	405
GETAREA for.....	225	structure-based design of ligands of.....	408
in biomacro molecules.....	230	structure of.....	397
in molecular chaperones.....	231	systematic search method to.....	402
in nucleic acids.....	231	Tabu search to.....	406
in polysaccharides.....	231	Vaccines.....	207,377
in proteins.....	230	and use of software tools.....	207
in protein-protein complexes.....	231	antigen mapping for.....	212
in protein-DNA complexes.....	231	applying minimal constructs for extremely variable	
in structure based drug design.....	223	infectious agents.....	216
information theory of.....	228	approaches to.....	207
knowledge based prediction of.....	228	bioinformatics application to development of.....	210
NACCESS for.....	225	bioinformatics resources used for design of.....	218
nonlinear regression of.....	230	computer design of.....	207
polyview for.....	226	discovery of.....	377
prediction of.....	226	genomics studies of.....	210
real value ASA prediction of.....	228	informational resources of.....	207
representation of.....	225	modelling T cell mediated antigen presentation/	
role of.....	223	recognition to design.....	380
use of machine learning in.....	228	predicting peptide-MHC specificity for.....	384
use of multiple sequence alignment in.....	227	principles of design of.....	216
use of NETASA in.....	228	role of computational chemistry.....	377
use of neural network in.....	226	role of databases.....	379
use of support vector machine in.....	228, 230	role of histocompatibility complexes into supertypes.....	389
Synthetic peptide vaccines.....	217	role of informatics.....	377
Thrombin.....	292	Vaccine construct development.....	209
application to structure-based design.....	294	antigen mapping for.....	212
		detection of protein-encoding areas in genome	
		sequences for.....	211

and effector mechanisms of immune response .....	209	to discover novel inhibitors of CDK .....	112
prediction of functional features of proteins for.....	211	to identify human aldose reductase.....	115
role of B epitope prediction in .....	213	to identify NK-1.....	120
role of T epitope prediction in.....	214	to identify retinoic acid receptor .....	120
Variable subset selection.....	163	to structure drug targets .....	103
and design repair .....	170	to study Bcl-2.....	122
in presence of flagged observations .....	163	to study inhibitors of protein.....	122
Virtual compound libraries.....	103	to study K <sup>+</sup> channel inhibitor .....	121
to discover inhibitors of cathepsin D.....	115	to study p56 Lck.....	123
binding site identification of.....	107	to study Rac 1 .....	122
composition of.....	105	Virtual screening .....	105,423
design of.....	103	and receptor flexibility.....	435
discovery of inhibitors of Rm1C.....	117	and synthetic challenge.....	105
docking of.....	103	molecular dynamics-based methods for.....	432
target selection for .....	106	multiple receptor conformation-based methods to .....	436
to discover inhibitors of Bcr-Abl.....	118	pharmacophore models for.....	436
to discover inhibitors of checkpoint kinase-1		receptor flexibility in.....	423
(Chk-1 kinase).....	116	use of multiple receptor conformations in.....	433
