

SUBJECT INDEX TO VOLUME 1

Absorption.....	78	Bcl-2 family	45
of anthocyanins	78	in oxysterol-induced apoptosis	45
Absorption/excretion.....	78,79	Berries	71
of flavonols.....	78,79	absorption of phytochemicals of	78
Adolescence	131,140,265	and currants	71
adaptations in calcium.....	266	as soft fruits	71
bone metabolism in	266	effects of food processing on.....	82
factors affecting bone mass acquisition during	267	essential micronutrients in.....	72
gastroesophageal reflux disease in.....	131	health benefits of	71
implication for bone mass in	265	health properties of phytochemicals of	75
implications for calcium metabolism in.....	265	in cancer	82
lactation in.....	265	in heart disease	82
pregnancy in.....	265	in immune system.....	82
Adult disease.....	105	in neurological function.....	82
developmental origins of.....	105	in urinary tract health	82
Alzheimer's disease (AD).....	215	phytochemicals in.....	72
animal studies of	221	Berry phenolics	80
DHA in.....	221	bioavailability of.....	80
effect of caloric restriction on	221	Bioavailability.....	80
effect of fatty acids on.....	224	of berry phenolics.....	80
effect of homocysteine on.....	222	Body composition	90
effect of isoflavones on	224	in anorexia nervosa.....	90
effect of minerals on.....	222,223	Bone health.....	89
effect of phosphatidylserine on.....	222,224	during anorexia nervosa	89
effect of phytoestrogen on.....	222	Bone metabolism.....	265
effect of vitamins on.....	222,223	Brain aging.....	217
human studies of	222	effect of antioxidants in.....	218
role of essential nutrients in	216	effect of caloric restriction (CR) in	217
role of non-essential nutrients in	217	effect of carotenoids in	219
Anorexia nervosa	87,97	effect of essential nutrients in.....	218
and gastrointestinal disease	91	effect of fatty acids in	218
and use of total parenteral nutrition refeeding	97,101	effect of isoflavones in	220
biological consequences of	87	effect of minerals in.....	220
body composition in.....	90	effect of non-essential nutrients in	220
bone health during.....	89	effect of phosphatidylserine (PS) in	220
criteria for.....	97	effect of vitamins/homocysteine in	218
endocrine/metabolic derangements in.....	91	Calcium	46,265
epidemiology of	97	and oxysterols.....	46
expected lifespan in.....	92	effect on bone mass/turnover	266
malignant disease during.....	90	intestinal absorption of	266
medical complications of	98	recommended intake during pregnancy/lactation.....	272
nature of starvation in.....	87	recommended intake of	267
refeeding in.....	99	urinary excretion of	266
reproductive/obstetric health aspects in	87	Caloric intake	16
Anthocyanins	78	in obesity	16
absorption of.....	78	Caloric restriction (CR).....	215
Apoptosis	41,43	Cancer	82,143,153,190
cholesterol in	41	and parenteral nutrition	143
oxysterols in	43	berries in	82
Atheromatous plaque stability	167	changes in energy expenditure in	145
and long chain n-3 polyunsaturated fatty acids.....	167	energy of activity in.....	145
Atherosclerosis.....	48	meat in	153
and oxysterols.....	48	relation with chronic inflammation	193
		role of genes in	192

role of lymphatic endothelial cells in	190	Chromium	6
role of nuclear factor-kB (NF-kB) in	190	and cardiovascular disease (CVD)	6
studies of energy expenditure in	145	and metabolic syndrome	6
Carbohydrate/fat content	13	Chronic inflammation	183
and obesity	13	and obesity	183
Cardiovascular disease (CVD)	1,23,105,154	Developmental origins of health and disease (DOHAD)	
and chromium	6	hypothesis	105
and policosanol	4	criticisms of	108
and postprandial metabolism	23	implications of	121
costs of	8	sex-specific programming phenomena in	120
effects of haemostasis on	23	Diabetes	180
effects of inflammatory response on	23	peroxisome proliferator-activated receptors in	180
effects of postprandial lipaemia on	23	Diet	151
emerging risk factors for	23	significance of meat in	151
endothelial function in	27	Dietary measures	130
epidemiological evidence for programming of	105	in gastroesophageal reflux disease	130
epigenetic routes to	119	Dietary therapy	129
IL-6/TNF- in	27	in gastroesophageal reflux disease	129
influence of fatty meals on	23	Eicosanoid metabolism	173
meat in	154	and long chain n-3 polyunsaturated fatty acids	173
nutritional supplements of	1	Endocrine/metabolic derangements	91
Cardiovascular disease risks	15	in anorexia nervosa	91
in obesity	15	Endothelial activation	167
Cardiovascular/renal programming	110	and long chain n-3 polyunsaturated fatty acids	167
blood pressure in	110	Endothelial dysfunction	170
experimental models of	110	mechanisms of	170
general mechanistic concepts of	115	role of fish oil in	170
mechanisms of	115	Endothelial function	27,29
renal development in	113	in cardiovascular disease	27
renin-angiotensin system in	117	in inflammatory response	29
timing of programming insult of	115	Energy balance	180
Caspases	45	Peroxisome proliferator-activated receptors in	180
in oxysterol-induced apoptosis	45	Energy expenditure	145
Celiac disease	245	in cancer	145
associated diseases with	247	Essential micronutrients	72
biopsy in	247	in berries	72
classification of	246	Fatty acid composition	27
clinical presentation of	246	on postprandial response	27
diagnosis of	246	Fatty meals	23
effect of gluten free diet on	248	on cardiovascular disease	23
epidemiology of	245	Fetal undernutrition	105
etiology-environment of	245	programming of blood pressure in	105
etiology-genetics of	245	Fish oil	170
histology in	247	in endothelial dysfunction	170
pathophysiology of	245	Flavan-3-ols	79
quality of life in	248	absorption/excretion of	79
role of HLA DQ2/DQ8 assessment in	247	Flavonols	78
selective IGA deficiency in	247	absorption/excretion of	78
serologic testing of	246	Folic acid	35
significance of	246	from food	35
Children	135		
nutritional needs for	135,137		
physiological needs of	136		
1-4 year old	137		
4-12 year old	141		
Cholesterol	41		
oxidised products of	41		
role in apoptosis	41		

functions of.....	35	endothelial activation in	190
Mendelian randomization of	37	markers of.....	26
scientific optimism about	36	nutritionally controlled molecular networks in	179
Food	35	peroxisome proliferator-activated receptors in	179
folic acid from.....	35	physiopathologic links with cancer	189
Food processing	82	role of chemokines in	189
effects on berries	82	role of cyclooxygenases (COX)-1/2 in.....	191
		role of genes in	192
		role of lymphatic endothelial cells in	190
		role of nuclear factor-kB (NF-kB) in	190
Gastroesophageal reflux disease	129	Inflammatory response.....	23,28
dietary measures in.....	130	C-RP in.....	28
dietary therapy in.....	129	endothelial function in.....	29
from infancy to adolescence.....	129	IL-6/TNF- in	28
in adolescents	131	on cardiovascular disease	23
in infants.....	129	Iron	152
in older children	131	in meat	152
lifestyle measures in.....	130	Isoflavones	5
role of hypoallergenic formula in.....	130	and metabolic syndrome.....	5
treatment of	129	Lipid profile	13
Gastrointestinal disease.....	91	in obesity	13
and anorexia nervosa.....	91	Long chain n-3 polyunsaturated fatty acids (n-3 PUFA)..	167
Gastrointestinal physiology	182	and eicosanoid metabolism	173
peroxisome proliferator-activated receptors in	182	and nitric oxide metabolism	172
		clinical assessment of endothelial function on.....	171
Haemostasis	23	effect on atheromatous plaque stability.....	167,173
on cardiovascular disease.....	23	effect on endothelial activation	167,168
Heart disease	82	effect on endothelial function.....	167
berries in.....	82	mechanisms of endothelial activation on	168
Hematopoietic stem cell transplantation (HSCT).....	143	Long-chain polyunsaturated fatty acids (LCPUFA)	259
cohort study of.....	146	and prenatal/early postnatal nutritional	
nutrition support of patients undergoing	143	supplementation.....	259
REE in pediatric patients undergoing	146	effect on neurodevelopment	259
recent studies of parenteral nutrition in.....	143	supplementation of	260
High-fat meals.....	24	Low carbohydrate diets	13
on postprandial response.....	24	in obesity	13
Hypoallergenic formula	130	Low fat diets.....	16
in gastroesophageal reflux disease.....	130	in obesity	16
		Magnesium.....	231
IBD prevention.....	182	and metabolic risk factors.....	231
peroxisome proliferator-activated receptors in	182	effect on blood pressure	234
IL-6/TNF-	27,28	effect on cardiovascular disease	231
in cardiovascular disease.....	27	effect on hypertension	231
in inflammatory response.....	28	effect on type 2 diabetes.....	231,235
Immune function	182	role in abdominal obesity	232
peroxisome proliferator-activated receptors in	182	role in cardiovascular diseases	238
Immune system	82	role in dyslipidemia	233
berries in.....	82	role in hypertension.....	236
Immunity.....	179	role in insulin resistance.....	232
nutritionally controlled molecular networks in	179	role in metabolic syndrome	234
peroxisome proliferator-activated receptors in	179	role in systemic inflammation.....	234
Infants	129	Malignant disease.....	90
gastroesophageal reflux disease in.....	129	during anorexia nervosa	90
Inflammation	26,179,189		
biological basis of	189		
C-RP in.....	26		

Malnutrition	253	Nutrients	151
cell membrane potential in	256	Nutrigenetics	207
effect on energy rich compounds	255	gene polymorphisms studies of	207
enzyme kinetics in	254	Nutrition	215
mitochondrial complexes I-IV in	256	effects on brain aging	215
muscle dysfunction in	253	functions of	215
oxidative phosphorylation in	256	role in Alzheimer's disease	215
potassium in	256	sources of	215
role of intracellular calcium in	256	Nutritional supplements	1
substrate availability in	254	in prevention of cardiovascular disease	1
Meat	151	modulating metabolic syndrome risk factors by	1
classification in epidemiological studies	155	recommendations of	7
consumption of	153	safety of	8
fat in	152	Nutritionally controlled molecular networks	179
in cancer	153	in immunity	179
in cardiovascular disease	154	in inflammation	179
in health	153	in metabolism	179
in type 2 diabetes	155	Obesity	13,180,183
in weight status	155	and carbohydrate/fat content	13
intakes of	155	and connection between chronic inflammation	183
iron in	152	caloric intake in	16
low consumption of	156	cardiovascular disease risks in	15
micronutrient bioavailability of	153	changes in weight/body mass index (BMI) in	14
quantification of	155	dietary approaches to treat	13
recommended intakes of	156	impact on weight loss in	13
Mediterranean diet	287	lipid profile in	13
Metabolic syndrome	1,287	low carbohydrate diets in	13
and chromium	6	low fat diets in	16
and isoflavones	5	peroxisome proliferator-activated receptors in	180
and omega-3 fatty acids	5	Omega-3 fatty acids	5
and plant sterols	5	and metabolic syndrome	5
and policosanols	4	Oxidative stress	46
and soy protein	5	and oxysterols	46
and stanols	5	Oxidised low-density lipoprotein (oxLDL)	47
role of mediterranean diet in	287	Oxysterols	41
role of protein in	287	and atherosclerosis	48
Metabolic syndrome risk factors	1	and calcium	46
by nutritional supplements	1	and mitochondria	46
Metabolism	179	and oxidative stress	46
nutritionally controlled molecular networks in	179	biological effects of	42
peroxisome proliferator-activated receptors in	179	dietary-	41
Micronutrient bioavailability	153	endogenous	41
of meat	153	in apoptosis	43
Mitochondria	46	in plasma	42
and oxysterols	46	sources of	41
Muscle	253	Oxysterol-induced apoptosis	44
function of	253	Bcl-2 family in	45
morphology of	253	caspases in	45
Neurodevelopmental outcome	260	signal transduction pathways of	44
prenatal fatty acid status of	260	Parenteral nutrition	143
postnatal LCPUFA supplementation of	260	and cancer	143
Neurological function	82	Parenteral nutrition-associated liver disease	161
berries in	82	clinical presentations of	161
Nitric oxide metabolism	172	diagnosis of	161
and long chain n-3 polyunsaturated fatty acids	172		

management of.....	161	anti-neoplastic actions of.....	189
pathogenesis of.....	161	structure of.....	194
pathology of.....	162		
risk factors for.....	161		
treatment of.....	163		
Peroxisome proliferator-activated receptors (PPAR).....	179	Selenium.....	201
in diabetes.....	180	animal studies of.....	203
in energy balance.....	180	human studies of.....	203
in gastrointestinal physiology.....	182	in cancer.....	203
in IBD prevention.....	182	in diet.....	201
in immune function.....	182	in food.....	201
in immunity.....	179	metabolism of.....	202
in inflammation.....	179	protective effects of.....	201
in metabolism.....	179	Selenoproteins.....	201
in obesity.....	180	biosynthesis of.....	203
Phytochemicals.....	72,194	high-throughput technologies to study.....	208
antiinflammatory action of.....	194	in carcinogenesis.....	208
antineoplastic activity of.....	194	mouse models of.....	208
based absorption of berries.....	78	role in cancer.....	201
based health properties of berries.....	75	Signal transduction pathways.....	44
in berries.....	72	of oxysterol-induced apoptosis.....	44
Plant sterols.....	5	Soft fruits.....	71
and metabolic syndrome.....	5	berries as.....	71
Policosanol.....	4	Soy protein.....	5
and cardiovascular disease (CVD).....	4	and metabolic syndrome.....	5
and metabolic syndrome.....	4	Stable isotope.....	63
Postprandial lipaemia.....	23	use in bioavailability of Mg.....	63
on cardiovascular disease.....	23	use in cellular Mg exchange studies.....	68
Postprandial metabolism.....	23	use in exchangeable Mg pool studies.....	66
and cardiovascular disease.....	23	use in intestinal Mg absorption studies.....	63
Postprandial response.....	24	use in metabolism of Mg.....	63
effect of fatty acid composition on.....	27	Stanols.....	5
effects of high-fat meals on.....	24	and metabolic syndrome.....	5
Prostate cancer.....	53	Starvation.....	87
vitamin E in.....	53	in anorexia nervosa.....	87
Protein.....	151,288	Thiamin.....	277
development of insulin resistance by.....	291	absorption of.....	280
effect on insulin levels.....	288	as antioxidant.....	283
in meat.....	151	bioavailability of.....	280,284
intake of.....	288	blood/plasma concentration of.....	281
renal malfunction by.....	291	effect of bread making on.....	280
role in postprandial glucose.....	288	effect of growing conditions on.....	279
role on cardiovascular disease risk markers.....	289	effect of milling on.....	279
role on fasting.....	288	effect of storage on.....	280
		effect of variety on.....	279
		excretion of.....	281
		factors affecting levels in wheat/wheat products.....	279
		in protection against metabolic stress.....	283
		intestinal absorption of.....	280
		intracellular metabolism of.....	281
		physiological role of.....	282
		reabsorption mechanism of.....	280
		repartition in grain.....	277
		sensitivity oxidative stress.....	283
		Thiamin deficiency (TD).....	277
		causes/consequence of.....	282
		cereal products in prevention of.....	277
		effect of growing conditions on.....	279
Refeeding syndrome.....	100		
Renal disease.....	107		
epidemiological evidence for programming of.....	107		
epigenetic routes to.....	119		
Renin-angiotensin system.....	117		
in cardiovascular/renal programming.....	117		
Reproductive/obstetric health aspects.....	87		
in anorexia nervosa.....	87		
Resveratrol.....	189		
anti-inflammatory action of.....	189		

effect of milling on.....	279	future directions for.....	53
in western countries.....	277	genes involved in transport/metabolism of	54
marginal/severe type	277	in prostate cancer.....	53
physio-pathological consequences of.....	277	intake of.....	53
Total parenteral nutrition refeeding	97	mechanisms of action of.....	53
of anorexia nervosa	97	public health recommendation of.....	59
Type 2 diabetes	155	requirements of.....	53
meat in	155	structure of.....	53
Urinary tract health	82	Weight loss.....	13
berries in.....	82	in obesity	13
Vitamin E	53	Weight status.....	155
dietary sources of	53	meat in	155
epidemiologic studies of	55	Weight/body mass index (BMI).....	14
		in obesity	14
