

SUBJECT INDEX TO VOLUME 2

<p>Acute/chronic hyperglycemia377 effect on MG-induced nPC-12 apoptosis.....378</p> <p>Adrenergic modulation 169 of dendritic cells function 169</p> <p>Aging..... 80,365 investigation of oxidative stress associated with..... 80 use of cell/tissue culture models for 80</p> <p>Akt..... 59 and forkhead transcription factors 59 downstream substrates of..... 59 glycogen synthase kinase-3 59</p> <p>Alzheimer's disease (AD).....55,179,261,341 amyloid- in179 and oxidative stress55 animal studies in.....180 beta-amyloid cascade hypothesis for341 caspase activity regulates tau/presenilins in.....62 cell cycle induction in post-mitotic neurons for.....64 cell studies in.....180 cellular therapeutic targets for.....55 cerebral amyloid angiopathy in.....341 cerebrospinal fluid (CSF) studies in.....180 deployment of cellular targets against.....63 excitotoxicity in.....343 ferric cycle activity in.....261 glucose dysfunction as trigger of342 glutamate in.....343 human brain studies in179 hypercholesterolemia in342 hyperphosphorylated in.....181 implications for therapy of.....265 inflammation in343 inflammatory mechanisms in57 medical implications of.....55 metabotropic glutamate system in.....64 novel mechanisms of cell injury in55 oxidant mechanisms in.....179 oxidative stress in.....343 pathophysiology of.....55 rodent models for344 role of cholinergic neurons344 role of caspases61 role of cytokines.....65 role of hyperhomocysteinemia.....343 role of neurovascular unit344 role of protein kinase B (Akt)59 role of silent stroke in.....342 role of Wnt pathway.....57 secretases in.....61 strategies for63 targeting nicotinamide adenine dinucleotide (NAD⁺) for63 targeting precursor nicotinamide for.....63 vascular dementia in.....341 vascular hypothesis for.....345 vascular risk factors in342</p>	<p>-Aminolevulinatase synthase..... 133 expression in monocrotaline-induced pulmonary hypertension 133 using cDNA probes..... 134</p> <p>-Amyloid (A) 3,180,388 as deleterious agent 180 effect on cell viability..... 7 effect on forward mode Na⁺/Ca²⁺ exchange activity.. 5 effect on Mn²⁺ influx..... 5 effect on oxidative stress level 5 effect on reverse mode Na⁺/Ca²⁺ exchange activity... 5 effect on oxidative stress level 7 neurotrophic/antioxidant properties of 180 role in progressive neuronal injury..... 389</p> <p>ANG II 114 changes in blood pressure levels after 114</p> <p>ANG II/salt loading..... 115 in HO-1 TG mice 115</p> <p>Anoxic neuronal injury 273 analysis of cytochrome C release 273 assessment of cysteine protease activity in 273 assessment of mitochondrial membrane potential in..... 273 PARP cleavage in..... 273</p> <p>Apaf-1 377 protein expression of 377</p> <p>Apaf-1 expression 381 effect of acute lowering of glucose enhances 381 effect of chronic high glucose 381</p> <p>Apoptosis..... 121,375 by cyclic GMP 121 induced by BSO 121 mediated by bilirubin 121</p> <p>Astroglial cells 141 caspase-3 in..... 141 effects on primary cultured astrocytes subjected to SIN-1-induced cytotoxicity 143 lactic dehydrogenase (LDH) release from 142 MTT bioassay of..... 142 role of heme oxygenase-1 141 role of propofol 141</p> <p>Blood-brain barrier..... 49 alterations of 49 development in MDX mouse 52 role of astrocytes in..... 50 role of dystrophin..... 47</p> <p>Brain 214 regulation of polyamine metabolism in..... 214</p> <p>Bromodeoxyuridine..... 122</p> <p>BSO-induced glutathione depletion 124 effect on expression of HO-1/HO-2 in olfactory epithelium 124</p>
--	---

Carbonyl stress-induced apoptosis	375	Chronic high glucose.....	377
acute reduction in glucose in.....	379	effect on GSH/disulfide imbalance	377
effect of hyperglycemia	375	Coenzyme Q-10	447
in naïve PC-12 cells	375	deficiency of	453
relationship to cellular redox/activator protease		in aging	447,448
factor-1 expression	375	in Alzheimer's disease	448
Caspase-3	17,143	in amyotrophic lateral sclerosis	449
activation of	17,143	in cancer	447,452
Caspase-9	17	in cardiomyopathy	451
MG-induced.....	17	in cardiovascular disease	447,451
Cell cycle	105,106	in diabetes mellitus	447,453
effect of heme/HO activity on	106	in fatigue	449
Cell survival.....	198	in Friedreich's ataxia	449
and DNA fragmentation.....	198	in Huntington's disease.....	450
assessment of.....	198	in hypertension.....	451
Cellular heme	105	in ischemic damages	452
effect of glucose on.....	105	in neurodegeneration	447
Central nervous system (CNS).....	409	in neurodegenerative disorders	448
adhesion molecule in.....	412	in Parkinsons's disease	450
barrier function in.....	409	therapy in other disease.....	453
bradykinin in	412	CsA-treated rats.....	158
chemokines in.....	410	morphological findings in.....	158
cytokines in	411	CXCR4.....	322
derivatives of arachidonic acid in	412	mechanisms in expression of.....	322
histamine in.....	412	Cyclosporine A (CsA).....	157
microvascular anatomy of	409	effect of	158
Cerebrovascular damage	341	Cysteine protease activity	199
cause for Alzheimer's disease	341	assessment of.....	199
excitotoxicity in.....	343	modulation of	199
glutamate in.....	343	Cytokines.....	418
oxidative stress in.....	343	effect on cerebral endothelium.....	418
rodent models for	344	effect on microglia.....	418
Cerebrovascular gene therapy.....	235	Dementia	341
cerebrospinal fluid delivery in	239	forms of	341
delivery systems in.....	236	rodent models for.....	344
direct injection in.....	239	Dendritic cells (DC)	170
facilitation of vascular delivery across blood-brain		discrete adrenergic influence on	171
barrier in	239	effect of antigen presentation.....	170
for ischemic brain disease	240	effect on cytokine production	170
for restenosis after angioplasty/stenting	242	for immune homeostasis	169
for SAH	241	influence on.....	170
liposomal gene transfer with cationic liposomes	238	toll like receptors activation in.....	171
non-viral gene transfer in	238	DNA distribution.....	105
progress in	235	DNA fragmentation assays	149,150
role of MCP-1	243	Drug abuse	77
routes of delivery in	239	cell culture models of.....	80
using adeno-associated virus vectors	237	Duchenne muscular dystrophy (DMD).....	47
using adenoviruses	237	animal model of	47
using BDNF	241	association between ZO-1/actin in.....	49
using FGF.....	240	blood-brain barrier alterations in	47
using GDNF	240	MDX mouse model of	47
using herpes-simplex virus-1	237	role of DMD gene	47
using HGF	241	Dystrophin.....	47
using HVJ-E.....	238	in brain vasculature	47
using naked DNA	238		
using retroviruses	237		
using VEGF.....	241		
viral gene transfer in.....	237		

Endothelial cells.....	410	Glucose-mediated oxidative stress.....	103
immune cell activation by	410	8- <i>epi</i> -isoprostane PGF ₂ arachidonic for	105
regulation of BBB permeability by	410	effect of heme/glucose on	105
Endothelium.....	418	effect of heme oxygenase overexpression	103
interaction with microglia	418	in G ₀ /G ₁ cell cycle phase.....	105
Erythropoietin	387	in quiescent cell phase	103
blockade of membrane phosphatidylserine (PS)		linking heme to hyperglycemia complications	103
externalization during A toxicity	389	Glutathione.....	122
blocks apoptotic genomic DNA fragmentation.....	389	measurements of	122
for neuronal protection against A	389	G-protein mGluR family	425
in β -amyloid toxicity.....	387	c-Jun-amino terminal kinases of.....	438
prevention of apoptosis injury by.....	394	extracellular signal-related kinases of	438
protection of neuronal survival by	394	p38 kinases of.....	438
role of NF- κ B	387	Heme-mediated oxidative injury.....	189
to prevents degradation of NF- κ B p65.....	391	protects astrocytes from	189
to promotes nuclear translocation during		Heme-mediated oxidative stress	106
A toxicity	391	on 8- <i>epi</i> -isoprostane F ₂ generation/	
Estrogen	287	superoxide anion	106
activation of MAPK signaling by	293	Heme oxygenase (HO).....	125,157,163
in brain	288	characterization of.....	163
mechanisms of neuroprotection of.....	293	expression in cyclosporine A induced injury.....	157
neuronal preservation by.....	288,290	in adult rodent platelets.....	163
P13K signaling in neuroprotection by.....	295	protective effects of	157
role in orchestrate neuroprotection.....	287	stimulates neuronal precursor proliferation	125
signaling pathways associated with		Heme oxygenase (HO-1)	103,143,113,189
neuroprotection by	295	effect of glucose on.....	105
to activate classical/alternative mechanisms.....	287	expression of	189
to promote neuronal cell survival.....	293	in coronary artery.....	117
Experimental autoimmune encephalomyelitis (EAE)	352	in vascular smooth muscle cells.....	113
chronic stimulation of glial cells in.....	356	induced by angiotensin II.....	113
epitope spreading in	356	MG-132 expression of	191
mechanisms of immune regulation in	356	microsomal heme determination of	105
Ferric cycle activity.....	261	role of proteasome inhibition	189
and cell pathology in Alzheimer's disease.....	262	to counteracts cardiovascular damage	113
and progression of Alzheimer's disease.....	264	urinary excretion of.....	115
consequences of	261	western blot analysis for	105,143
for development of critical heme deficiency in		Heme oxygenase-2	23,121
vulnerable neurons	262	protects against glutathione depletion-induced	
in iron regulatory protein 2 expression in		neuronal apoptosis	121
Alzheimer's disease	263	Hipocampal neuronal injury.....	272
mechanism for amplification of oxidative stress	261	assessment of DNA fragmentation in.....	272
promotes cell cycle abnormalities in		HIV-associated dementia	79
Alzheimer's disease	263	pathogenesis of	79
promotes cell signaling abnormalities in		role of viral proteins.....	79
Alzheimer's disease	263	HK	3-252
role in neuritic pathology	263	and enzymes	252
Gene silencing.....	388	HO-1 mRNA	106
and NF- κ B p65.....	388	in quiescent endothelial cell.....	106
Gene/protein expression analysis.....	84	quantification of.....	106
advances in	84	HO-2..	105,143
impact on CNS culture modeling of.....	84	microsomal heme determination of	105
Glucose	107	western blot analysis for	105,143
potentiated 8- <i>epi</i> -isoprostane F ₂ induced by		HO-2 null mice.....	126
heme.....	107	cGMP and bilirubin levels in	126

Human essential hypertension	303	in dischromic pathologies.....	256
1-adrenergic receptors in	308	in encephalopathy.....	255
2-adrenergic receptors in	308	in epilepsy.....	254
-adrenergic receptors in.....	308	in hypertension	255
alpha-stimulating activity polypeptide 1 in.....	310	in hypertryptophanemia.....	256
catechol- <i>O</i> -methyl transferase in	307	in ischemia.....	253
dopamine -hydroxylase in.....	305	in malaria.....	256
dopamine receptors in	309	in migraine.....	254
G protein-coupled receptor kinase 4 in	311	in paroxysmal dyskinesia	254
gene-based associations of	311	in periphery.....	255
gene-environment interactions of.....	311	in renal failure	256
guanine nucleotide binding protein in.....	310	in rheumatoid arthritis	256
haplotype analyses of	311	in schizophrenia.....	255
monoamine oxidase A in.....	307	ophthalmological aspects of	255
norepinephrine transporter in	307	pathological roles of.....	253
phenylethanolamine <i>N</i> -methyl transferase in.....	307	role in central/peripheral nervous systems	249
role of genes	303	therapeutic approaches of.....	256
role of sympathetic nervous system	303		
signal transduction in	310	Lipid peroxidation.....	175
tyrosine hydroxylase in	305	induced by methionine intake	175
Huntington's disease (HD)	79	Lympho-hematopoietic stem cells (LHSC)	320
cell/tissue culture studies of neurodegeneration in..	79		
8-Hydroxydeoxyguanosine	114	MDX brain	50
in urine	114	alterations in astroglial cells in	51
measurement of.....	114	alterations of vessels wall in	50
urinary excretion of	114	Melatonin	175
Hyperphosphorylated	181	effect on Hcy/brain LPO.....	176
animal studies of.....	181	effect on neural lipid peroxidation	175
antioxidant properties of.....	181	to prevent hyperhomocysteinemia	175
as deleterious agent.....	182	Membrane nuclear estrogen receptors	290
cell studies of	181	modulators of.....	295
<i>In situ</i> brain freezing	150	Membrane phosphatidylserine (PS)	199,388
Inflammation.....	414	assessment of.....	199
in tissue injury	414	modulation of	199
Injury.	73	residue externalization of	388
cell culture models of	73	Membrane phosphatidylserine (PS) residue	
in central nervous system	73	externalization	272
Ischemic brain disease	225	assessment of.....	272
implications in.....	225	Metabotropic glutamate receptors (mGluRs).....	197,425
pathophysiology of.....	225	activation by Akt1 activation	201
8-Iso-prostaglandin F ₂ isoprostane.....	114	activation modulates mitochondrial membrane	
in urine.....	114	depolarization	203
measurement of.....	114	activation prevents membrane phosphatidylserine	
		(PS) externalization	201
		active integration/transition of signal transduction	
		pathways.....	427
Kynurenines	249	Akt/caspase dependent pathways of.....	197
and enzymes	251	blockade of microglial activation.....	201
as neuroactive metabolites	251	cellular expression of.....	426
cellular mechanism of action of	252	cellular protection/toxicity of.....	429
in AIDS	255	control of endonuclease activity.....	434
in Alzheimer's disease	254	extrinsic/intrinsic pathways of.....	435
in amyotrophic lateral sclerosis.....	254	function of	426
in anemia of inflammation	255	in brain disorders.....	428
in bowel disease	256	in cell survival	425
in coronary heart disease (CHD).....	255	in cellular plasticity	425
in depression.....	255	in programmed cell death.....	430

in regulation of mitochondrial membrane potential	438	cytokines in	350
inhibits caspase 9-like activity	204	dysfunction of blood brain-barrier (BBB) in	350
signal transduction pathways of	425	experimental models of	349,352
targets microglial activation	197	heterogeneity of lesions in	350
to control cellular acidity	434	regulatory T cells in	352
to modulates microglial proliferation/activation	431	role of autoreactive T/B cells in	352
to prevents neuronal cell engulfment	197	Myelin antigens	354
Methionine	175	autoimmunity to	354
effect on serum Hcy levels	176	tolerance to	354
Methylglyoxal-induced apoptosis	13	Na ⁺ /Ca ²⁺ exchange activity	4
activation of caspases in	14	measurements of	4
detection by DAPI staining	14	reverse/forward mode of	4
influence of cellular redox on	13	Neurodegeneration	81,415
measurement of protein-SSG in	14	in brain	81
measurements of GSH/GSSG in	14	role of glia in	415
protein expression of cytochrome C/Bax/BcL-2 in	14	Neurodegenerative brain disorders	77
susceptibility of differentiated PC-12 cells to	13	Neuroinfections	77
susceptibility of naive PC-12 to	13	degeneration associated with	77
Microglia	416,419	Neurons	192
as target of pharmacological intervention		effect of MG-132 on hemin toxicity to	192
against CNS pathologies	416	Neuronal apoptosis	125
crossstalk with microvasculature	419	by HO-2 deficiency	125
Microglial activation	198	Neuronal heme oxygenase-2	23
assessment of	198	mice lacking genes for	23
Middle cerebral artery	24	stroke outcome in	23
occlusion of	24	Neuronal survival	388
reperfusion in	24	assessment of	388
Mitochondria	199	Neuronal/vascular survival	430
for analysis of cytochrome C release	199	targeting injury mechanisms to maintain	430
Mitochondrial apoptotic pathway	16	Neuroprotection	365,389
Mitochondrial encephalopathy/myopathy/lactic acidosis		by EPO	389
stroke like episodes (MELAS)	29	ischemic-preconditioning-induced	365
analysis of neurovascular cellular mechanisms in	29	role of glia in	415
concept of	30	Neuroprotective effects	127
genetics of	32	bilirubin mediate	127
molecular mechanisms of mutations in tRNA		of HO-2 <i>in vitro</i>	127
LEU(UUR) gene in	30	role of cGMP	127
pathogenesis of stroke-like episodes in	29	Neurovascular unit	409
phenotypic diversity of	32	function of	409
Mitochondrial integrity	17	integrity of	409
PARP cleavage with loss of	17	role in inflammatory cell systems	409
Mitochondrial permeability transition	17	role of integration of vascular on cell system	409
nPC12 apoptosis by	17	NF- B p65 family	388
Mongolian gerbil	401	western blot analysis for	388
behavioral/histological variability in	401	Nicotinamide (NIC)	271
evaluation of PcomA plasticity in	403	as sirtuin inhibitor	271
in cerebrovascular anatomy of	401	effect on AKT	271
Multiple sclerosis (MS)	349	effect on BAD	271
adhesion molecules in	350	effect on mitochondrial associated anti-apoptotic	
advantages/limitations of mouse EAE models		pathways	271
in studies of	358	effect on PARP	271
antigen presenting cells (APC) in		in acute anoxic injury	271
immunopathology of	352	in neuronal cell survival	271
autoimmune mechanism of neuroinflammation/		induced phosphorylation of BAB	276
neurodegeneration in	351		
chemokines in	350		

prevents mitochondrial membrane depolarization	276	cytotoxicity of.....	217
to inhibits PARP cleavage induced by anoxia	276	functions of.....	215
to prevents apoptotic genomic DNA fragmentation	275	in ischemic brain	213
to protects neurons against anoxia-induced neuronal injury	273	neuronal/glial responses to	213
to protects neurons through inhibition of caspases 8/1	276	transport in brain	215
to regulate activity of Akt1 to foster neuronal protection.....	276	Porine cerebral white matter.....	149
Nitric oxide synthase.....	23	edema in oxidative stress	149
mice lacking genes for	23	plasma infusions into	149
stroke outcome in.....	23	pro-inflammatory cytokine gene expression in	149
Nrf2 transcription factor	191	Primary hippocampal neuronal cultures.....	198
MG-132 levels of	191	Prion disease.....	78
Nuclear factor- B (NF- B)	135,387	neurotoxicity in	78
DNA binding activity of.....	135	oxidative stress induced by prion peptide (PrP) in CNS cell cultures	78
in -amyloid toxicity	387	Propofol.....	142
to prevent early/late apoptosis neuronal injury.....	387	and SIN-1 treatment.....	142
Nuclear translocation	387	Proteasomal inhibition	192
in -amyloid toxicity.....	387	protective effect of.....	192
OK-PTH cells.....	5	Protein kinase B (PKB).....	59
cell viability assay of	5	Pulmonary ALAS1 expression.....	137
Olfactory receptor neurons	123	Pulmonary heme oxygenase-1	133
immunocytochemistry of.....	123	expression in monocrotaline-induced pulmonary hypertension.....	133
primary culture of	123	using cDNA probes.....	134
Orchestrated estrogen dependent neuroprotection.....	296	Pulmonary HO-1 expression	135
involvement of multiple pathways in.....	296	Quin	252
Oxidative stress.....	73,114,150	and enzymes	252
cell culture models of	73	Rat adrenal pheochromocytoma (PC12) cells.....	376
cell/tissue culture-based experimental models for... 77	77	detection by DAPI staining	376
cell/tissue culture studies of beta-amyloid (A) neurotoxicity in.....	78	Relapsing-remitting EAE.....	355
CNS detection of biological markers of oxidative damage.....	74	chronic stimulation of glial cells in	356
detection of tissue levels of	114	epitope spreading in.....	356
determination of.....	150	mechanisms of immune regulation in	356
in central nervous system	73	models of	355
in CNS using cell/tissue cultures	76	role of CD4+ T cell in	357
<i>in vitro</i>	76	role of MCP-1 (CCL2) in	356
modeling of.....	76	Relapsing-remitting multiple sclerosis.....	349
neuroprotection against.....	81	experimental models of	349
pathogenesis of	77	Relaxin	225
role for tissue/cell culture models in.....	81	effect on heart.....	228
Parkinson's disease (PD)	79	in brain.....	229
cell culture studies of 6-hydroxydopamine (6-OHDA)/N-methyl-4-phenyl-1,2,3,6-tetrahydropyridine (MPTP) neurotoxicity.....	79	in ischemic brain disease.....	230
PC12 apoptosis.....	16	in vascular physiology.....	225
expression kinetics of central protein components of.....	16	role in cardiac ischemia-reperfusion	228
mitochondrial involvement in.....	16	Reverse transcriptase polymerase chain reaction (RT-PCR).....	150
Polyamines	213	Reverse transcription.....	123
and relevant oxidation products	217	RNA ..	123
concentrations under pathological conditions.....	217	RV pressure.....	134
		measurement of.....	134
		using cDNA probes.....	134

Salt	114	Sympathetic nervous system (SNS).....	303
changes in blood pressure levels after	114	components of	304
Stem cells	319	gene-gene interaction with	312
Stroke-like episodes	32	interactions with physiological pathways.....	312
acute therapy during	41	TNF-	135
characteristics of	32	gene expression of	135
clinical features of	32	Transient global ischemia	365
epileptic seizure associated with.....	34	histological/immunofluorescent assessments of ...	366
future direction for.....	41	in rats	365
generalized cytopathic mechanism.....	38	production of	366
headache associated with.....	33	Uridin deoxynucleotide nick and labeling (TUNEL).....	122
ischemic vascular mechanism in	38	Vascular endothelium.....	409
non-ischemic neurovascular cellular mechanism in	38	in brain inflammation.....	409
pathology of.....	37	role of microglia.....	412
pathophysiological features of.....	36	White matter injury	149
radiological features of	34	effect on blood-brain-barrier permeability	149
theories on pathogenesis of.....	38	implications for	149
treatment strategy of	41	Wnt family	331
Stromal derived growth factor-1alpha	319	functional classes of	331
adverse biological consequences of	326	Wnt-frizzled signaling pathway	331
CXCR4 regulation of	322	canonical/non-canonical pathways in.....	332
expression of	321	in Alzheimer's disease.....	336
for stem cell homing.....	319	in nervous system	331
hypoxia in.....	322	in neuronal development	333
implications for neural development/repair	325	in neuronal injury	333
mechanisms in expression of	322	in neuropsychiatric disorders.....	336
role in cell migration/microenvironmental	324	in retinal disease	336
interaction.....	324	therapeutic modalities in	336
role in cell proliferation.....	323	vital elements of	331
role in cell survival.....	322		
role in development.....	319		
role in injury.....	319		
structure of	321		
Superoxide anion (O ₂).....	105		
production of.....	105
